Summary

Full-stack Software Developer with **4+ years** of experience building and deploying production-grade web applications across healthcare, e-commerce, and enterprise sectors. Actively transitioning into **AI/ML Engineering**, currently pursuing **M.Tech in AI & ML from BITS Pilani (WILP)**, with hands-on experience in Python, REST API design, and scalable backend systems. Experienced in integrating third-party APIs and automating workflows; developing proficiency in **machine learning, agentic AI (LangChain, Ollama), LLM API integration, and data-driven application development** to bridge software engineering with intelligent systems.

Technical Skills

AI/ML & Data: Python, NumPy, Pandas, Scikit-learn, Jupyter Notebook, Google Colab, LangChain, Ollama, LLM APIs (OpenAI / Anthropic Claude), Prompt Engineering, Agentic Workflows, REST-based AI integrations

Languages: PHP, JavaScript, TypeScript, Python, SQL

Frameworks: Laravel, Node.js, Express.js, React, Django, CodeIgniter

Frontend: Blade templates, Livewire, Bootstrap, Tailwind CSS, HTML, CSS, JavaScript, Redux

Databases: MySQL, MongoDB, Prisma

Integrations: WhatsApp Business API, Sendgrid, Razorpay, SMSCountry, Twilio, Shiprocket, Google Maps API

Tools & Infrastructure: AWS, DigitalOcean, Apache, Nginx, Git, GitHub, Postman, Asana, Slack, Docker, TinyPNG, Power Automate, Playwright

Other: RESTful APIs, QR code generation, push notifications, location-based services, video calling

Experience

Full Stack Software Developer, Mahindra First Choice Wheels Limited (MFCWL) – Bangalore, KA — Jul 2025 – Present

- Own end-to-end development of the **Preinspection** module for MMFSL, delivering features and L2/L3 support for business-critical used-vehicle inspection workflows.
- Design and optimize REST APIs using **CodeIgniter** and **MySQL**, improving application performance through query optimization, indexing, payload reduction, and backend refactoring.
- Designed a proof-of-concept **vehicle condition scoring and price adjustment model** using **Python, pandas, scikit-learn, and XGBoost**, leveraging inspection attributes such as vehicle age, mileage, and defect severity.
- Developed an **NLP pipeline** to classify sentiment and identify recurring vehicle- condition issues from inspection remarks, storing predicted ratings, issue categories, and confidence scores for downstream analysis.
- Built API-driven workflows to integrate ML predictions with inspection applications, including input validation, model-response handling, and database persistence.
- Built automated regression tests using **Playwright** and operational automations using **Microsoft Power Automate**, reducing repetitive testing and manual processing effort.
- Diagnose production issues, perform root-cause analysis, and deliver controlled hotfixes while collaborating with cross-functional stakeholders to maintain reliable releases.

Software Developer, KODS Technologies Private Limited – Bangalore, KA — Mar 2022 – Apr 2025

- Architected **13 real-time web applications**, integrating APIs like WhatsApp, Sendgrid, and Razorpay to enhance engagement for **10,000+** monthly users.
- Led system design for scalable platforms, researching solutions to optimize performance and user experience across industries.
- Managed projects via **Asana** and **Slack**, deploying on **AWS** and personal servers with **GitHub** CI/CD pipelines.
- Resolved concurrency and performance issues, boosting reliability for systems handling **6,000+** transactions monthly.

Education

M.Tech in Artificial Intelligence & Machine Learning (WILP), BITS Pilani — 2025 – 2027 (Pursuing)

- Work Integrated Learning Programme (WILP) – combining industry experience with advanced AI/ML study
- Relevant Coursework: Machine Learning, Deep Neural Networks, Data Engineering, MLOps, Statistical Methods for Data Science
- Hands-on: building AI agents with **LangChain** and **Ollama**

Bachelor's in Energy Engineering, North Eastern Hill University – Shillong, Meghalaya Aug 2016 – Jun 2020

- Major GPA: 7.95/10.0
- Thesis: Synthesis of carbon materials using Chemical Vapor Deposition
- Internship: Institute of Advanced Study in Science and Technology (IASST), Jun 2019 – Aug 2019

Projects

AI/ML Learning & Applied Projects

Applied AI/ML Portfolio – M.Tech Coursework *(Python, Jupyter Notebook, Git LFS)*

- Maintain a structured repository of lab notebooks, coursework, and applied exercises across **Artificial & Computational Intelligence**, **Deep Reinforcement Learning**, **Natural Language Processing**, and **Software Engineering for Machine Learning**.
- Translate classroom concepts into runnable Python notebooks (search/agent algorithms, RL environments, NLP pipelines), using Git LFS to version large course material and datasets.

Healthcare Applications

Medy Hospital Management App *(PHP MVC, MySQL, Bootstrap)*

- Enhanced hospital management app, streamlining workflows for **500+** daily users with optimized module design.
- Integrated secure data systems, boosting operational efficiency for healthcare providers.

Digital Doctor Clinic Telemedicine Platform *(Laravel, MySQL, Bootstrap, Zoom Meeting API, OpenTok)*

- Built telemedicine platform with video calling, enabling **1,000+** monthly consultations for patients.
- Designed scalable user role system, improving access for doctors and admins.

E-commerce and Retail

thesecrethaircare.com E-commerce & AI Platform *(Laravel, Filament, Laravel AI SDK, Anthropic Claude, MySQL, Redis, Razorpay, ShipRocket)*

- Maintained a platform processing **6,000+ monthly orders**, resolving concurrency issues and optimizing database operations for reliability.
- Developed an **AI-powered customer-support chatbot** using **Anthropic Claude**, featuring multi-turn memory, catalog-grounded responses, persistent conversations, safety guardrails, and rate limiting.
- Built administrative workflows with **Laravel Filament** and enhanced the payment and shopping experience for **50,000+ visitors**.

Trueweights Truck Weighing System *(Laravel, MySQL, IoT APIs)*

- Designed IoT-integrated truck weight system with automated photo capture, notifying **100+** drivers via API.
- Optimized real-time data pipeline, enhancing logistics efficiency for end users.

Tagncash Referral Platform *(Laravel, PHP, MySQL)*

- Developed referral platform with QR codes, serving **10,000+** users with location-based features.
- Integrated secure transactions, boosting user trust and engagement.

Organizational Management

Samruddhi Asset Tracking System *(Laravel, MySQL, Bootstrap)*

- Architected asset tracking for **100+** assets, streamlining resource management.
- Designed secure file uploads, enhancing operational efficiency.

Pragati User Management System *(Laravel, MySQL)*

- Built user management with SMS OTP for **500+** users, improving governance.
- Researched secure authentication, ensuring robust access control.

Sanidhya Event Ticket System *(Laravel, API)*

- Developed ticket system with WhatsApp integration, managing **2,000+** event tickets.
- Designed sales analytics dashboard, enhancing event planning for organizers.

Sri Ahobila Mutt Document Digitization Platform *(Laravel, MySQL, RDA Server)*

- Digitized documents for **50+** users, streamlining data access.
- Researched secure storage solutions, improving organizational efficiency.

Social and Entertainment

Filmox Social Networking Platform *(Laravel, PHP, MySQL)*

- Built social platform for **1,000+** movie enthusiasts with responsive UI.
- Researched UX to enhance user connectivity and content sharing.

Oodlesin Quiz Platform *(PHP MVC, MySQL)*

- Developed quiz platform for **5,000+** students with interactive features.
- Led system design, improving educational outcomes via UX research.

Last updated in Apr 2026

Custom Client Solutions

AVAtoms Learning Management System *(Laravel, MERN, FFmpeg, Rapid API, Code Editor)*

- Led end-to-end LMS development for **10,000+** students, incorporating AI-assisted workflow automation and dynamic content delivery to enhance learning outcomes.
- Designed course tracking system with data-driven UX, built for scalability across multiple institutions.

Vishvin Stock Management System *(Laravel, Bootstrap)*

- Delivered custom web app for **300+** users with tailored features.
- Researched client needs, optimizing system design for usability.

K2K IoT Inventory System *(React.js, Node.js, TypeScript, MongoDB)*

- Built IoT-integrated inventory system for **200+** users, optimizing production workflows with real-time data tracking.
- Designed user management module, aligning with company requirements.

Certifications

- Google Machine Learning Crash Course – Google Developers
- 100x Dev MERN Course – Harkirat Singh
- MERN Stack Full Course – Brad Traversy
- Python Full Stack Course, Pyspiders – Bangalore, Jul 2021 – Jan 2022
- Bolt Frontend, Aug 2020

Achievements

- **Performer of the Year 2024-2025**, KODS Technologies Private Limited – Recognized for exceptional contributions in developing and deploying real-time web applications, leading system design, and enhancing user experiences across projects.
- **Achieve First – Hyper Helper Award**, Mahindra First Choice (Car&Bike) – Recognized for the **AutoInspekt Release Project**, awarded by the Chief Technology Officer.
